JURATEK®

Airspring Assembly Type

(Rolling Lobe)

Rolling lobe airsprings have a low natural frequency and a high degree of lateral flexibility. They also give high spring deflection or lift by means of length change without the need to change the diameter.

This advantage means that vehicle bodies can be raised or lowered with the aid of airsprings used as axle springs, without additional equipment being required.

Convolute Type

Convolute airsprings are characterised by a favourable height to spring deflection ratio (with this type of airspring a relatively high spring deflection can be achieved with the smallest amount of overall height). Usually found in double or triple configuration.

Fixing Types

Unit 3 Rockingham Way, Redhouse Interchange, Adwick-Le-Street, Doncaster, DN6 7FB
